

# Ops Work

Chef for AWS

Moving parts:

- Stack – group of resources (whole app ecosystem, balancers, web servers, db's etc)
- Layer – element fo the stack (e.g. load ballancers )
- Recipe – layers depend on them to handle tasks such us instaling package on instances
- Instance – single computing resource
- App – application (S3 or Git) which specifies the type and how to depoy it

AWS OpsWorks add resource metrics to CloudWatch with custom metrics like:

- CPU idle,
- memor total,
- average load,

Supports Continous Integration
