ElastiCache

Engines

```
Memcached
    - AutoDiscovery of nodes, no need for endpoints
    - You can partition data up to 20 nodes
    - Always starts empty
Redis
    - Supports complex queries (ordering )
    - Single write node
    - Single node cluster
    - Up to 5 read replicas (replication group)
    - Can be initialized from a backup
    - Supports Backups and recovery
    - You can create manual snapshots
```

Multi AZ

```
- uses DNS to failover
- Replication is asynchronous
```

Security

```
- Use Security Groups and NACL to controll access
- When deployed to VPC cannot be visibible outside (Internet) and have only
private IP
```
